Now you know

United Press International  
SACRAMENTO, Calif. — Poor storage saps food of nutrients prematurely and speeds up spoilage, says dietitian Doris Derelien.

But there's a trade-off in storing breads and cereals, says the executive secretary of the California Dietetic Association. They stay fresh longer at warm temperatures but mold quickly unless prepared with a preservative. Refrigeration slows mold growth but hastens staling. Freezing is another alternative.

Derelien recommends using bread stored at room temperature within five to seven days, and that at freezer temperatures within three months.

Most fruits should be ripened at room temperature, then eaten at once or refrigerated.

Most fresh vegetables be refrigerated in plastic bags and washed or peeled before eating or cooking.

Lettuce and other greens: Rinse in cold water, drain well, refrigerate in plastic bags and eat within a week.

Mature onions can be stored at room temperature in a cool, dry place. Onions (scallions) should be refrigerated.
