The Jones-Lindzey Report is confined to 32 research-affairs or social work.

United Press International
DALLAS — A spot check of
Texas truck drivers indicated that most decided it was better — certainly more profitable — to keep on trucking and duck trouble Tuesday, the second day of a nation-wide independent truckers' strike.

'We can't afford to strike, but we can't afford to keep on the road either," Judy Price, an independent trucker from Austin, said. "Our costs have gone up constantly, but we can't raise

Price is referring to a new

that law President Reagan are to find an indication. Right signed in January which in now, the ones who have a load creases taxes on truck parts and truck use and raises federal fuel tax 5 cents a gallon.

Truckers across the nation responded to the new law by organizing a general strike that went into effect at midnight

"There's just a lot of talk now but I don't think anyone knows what will happen, said Claude Jones, vice president of Truck Harbor Inc. which owns a truck

stop on Houston's northside.
"We're as anxious as you all

will run. The ones without loads have pretty much gone home."

A trucker from Spring, Texas, who supplies fuel to about 21 customers including some independent service stations, said, "I've been asked by several of the independent truckers if I was going to shut my trucks down and I said 'No, I could not until Gulf, Exxon, Shell and the majors shut theirs

down."

He said there had been no re-

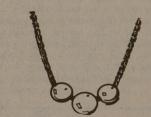

rary and information science,

ports of violence in his area and Brookshire, about 20 miles west the strike had slowed business.

didn't anticipate any. He also of Houston, said, "It's just as said that there was little evidence peaceful as Christmas Eve."

"From what I can observe this Hugh Schmieder, owner of the Union 76-truck stop in impact from the strike," he said.

UT graduate programs among nation's best

United Press International AUSTIN — The University of Texas' doctorate programs rank 6th among the nation's state-supported universities, making it the premier university in the Southwest, says UT presi-

dent Dr. Peter T. Flawn.

The study released Monday showed UT had eight doctorate programs listed in the nation's Top 10, including the best bottomy program.

botany program.
Flawn said the study "makes it clear that UT-Austin has now become one of the small group of truly outstanding state uni-

versities in the nation."

And, he said the report proved that UT is first in doctoral training among universities in the Southwest region, which in-cludes Arizona, New Mexico, Oklahoma, Louisiana, Arkansas and Texas.

The Jones-Lindzey Report ranked UT first in botany, third in linguistics and Spanish, sixth in Germanic languages and civil engineering, eighth in classics and zoology and 10th in compu-

ter sciences. The survey of 2,700 graduate programs at 228 universities also showed UT ranked in the top 20 in chemistry, geosciences, French, music, chemical, electrical and mechanical engineering, anthropology, psychology

and sociology. Only six state-supported universities had a greater number of top 10 programs than UT. They were the University of California-Berkeley, UCLA, University of Wisconsin, University of Michigan and Cornell University.

sity. UT ranked 22nd overall in top 10 programs.

The top 10 rated universities

were Stanford, Harvard, Yale, Chicago, Princeton, MIT, Columbia, Pennsylvania, California Institute of Technology and

William S. Livingston, vice president and dean of graduate studies at UT, said the survey, the first in a decade, "shows us

INVENT Brings Ideas to A&M

by Kim Schmidt

Eager entrepreneurs hoping to capitalize on new inventions or business ideas soon will be able to get expert advice and aid for their ventures through a newly estab-lished institute at Texas A&M Uni-

The Institute for Ventures in New Technology, or INVENT, is designed to help inventors create businesses to market their new

creations.

"INVENT's purpose is to commercialize new technologies in Texas," said Mr. Frank Sekera, Di-

rector of the institute.

But, although INVENT is interested in marketing new inventions, it will not attempt to promote all new product ideas submitted, Sekera said. Instead, it will evaluate each idea and promote only those which have been identified as having the highest technic-

opportunities offered by a development leave during the spring

'82 semester. He was invited to be

visiting scholar at the University of Sussex in Brighton, England. Fraser wanted to study the

changes in British financial poli-

particularly under the Thatcher

whether Britain's experiences hold any examples for the U.S. Because

he teaches a financial markets course, Fraser felt that this re-

search would make a strong con-

tribution to his teaching.
"On this development leave, re-

search was a means to improve my

teaching, not primarily a means to

more publications," he said. "I did

not go simply to complete the re-

search necessary for a specific paper. I viewed the experience more as one where I could develop and

learn."
Dr. Fraser has more than 100

publications to his credit, plus 5

books and monographs.

determine

cies, institutions, and markets-

government—to

al and market potential.
Sekera feels INVENT will be a
success because of the abundance
of ideas for new inventions which have already flooded his office and because of the uniqueness of the program.

Operating as a division of the

Texas Engineering Experiment Station, INVENT is a collaborative effort linking researchers in business administration and engineering, as well as other relevant disciplines.
"It is unique in that it is the only place in the United States where

the goal is to create business while involving academic staff, faculty, and students," Sekera said. And, Sekera said, any time con-

tact between the business and academic worlds is increased, good things are bound to happen. Sekera said inventors will be-

nefit from the great wealth of knowledge and resources at the University.

In exchange for its efforts, IN-VENT will receive a percentage of the revenues from the new business, Sekera said. Initially funded by state monies, the institute will eventually use these earnings along with donations as its means

of support.
Students will also benefit.
Sekera hopes that a credit course can be started to give students class hours for participating in technical and market research and planning the business start-up. He maintains that it would offer students a great opportunity to gain needed business experience.

INVENT began operating on campus in January, 1983, will be operating Texas-wide by April, and will be up to full operation by September. Students, faculty and staff who wish to participate in IN-VENT activities or who have inventions they wish to discuss should contact Frank Sekera at 845-0538.

Help Desks Open For Students

by Diane Yount

"Text and homework problem assignments promote understanding of course subject matter. If you do not understand and/or cannot solve the assigned homework, you should seek help. Help is avail-

This paragraph is typically included in course syllabuses for the College of Business Administration. The Departments of Accounting, Finance and Business Analysis all sponsor help desks designed to help students through their courses.

"We have resource people there to help students." says Dr. John Groth, Associate Professor of Fi-nance. "In the fall semester, the finance department had a help desk open 30 hours a week."

The help desks are located in Room 303B of the Academic and Agency building. The hours for each desk are determined by the graduate assistants who staff them. Usually, help is available between 10 a.m. and 3 p.m., Monday through Friday.

"We want students to have ample time to get help without hiring tutors." Groth says. "There is no reason a sincere student can't get help, but the student has to make an effort.

If a student is unable to get to the help desks during the day, evening help sessions are offered once a week by department professors.

"I ran three evening help sessions in the fall." Groth said. "We had one evening session a week, except for the weeks like bonfire and dead week. But the help desks still stayed open."

One of the problems with the help desks and evening help ses-

"We would like to find a room

just for finance people," he said.
"It needs to be the same room all the time. If it changes every day it becomes impractical to the student — people don't remember where the room is.'

Toddler shoots herself

United Press International HOUSTON — The 3-yearold daughter of a Houston-area police officer was critically wounded while playing with her father's revolver, police said

Homicide Detective S.P. Wilson said that Patricia Kennedy remained in critical condition at Hermann Hospital after apparently shooting herself in the abdomen while playing with her father's .357 magnum pistol.

Wilson said the sound of a

gunshot about 12:15 a.m. woke up the girl's parents, Lake Shores Police Officer Timothy Kennedy and his wife.

The couple ran into the living room and found their daughter lying in a pool of blood with the gun at her side, Wilson said. The child was rushed to a nearby hospital and then flown by emergency helicopter to Hermann Hospital for surgery.

Faculty members need time While at the University of Susaway from the day-to-day desex, Fraser was less than an hour from London, and he made severmands of teaching, research work, and committee responsibilities to refresh and renew their skills. Faal trips to the financial district of London, which is one of the two major financial centers of the culty development leaves provide the opportunity for faculty memworld and the major center for inbers to step out of daily routines to ternational financial markets. He brush up on old skills and develop interviewed both American banknew ones. Dr. Donald Fraser, Proers (in the London operations of Texas banks) and British bankers, fessor of Finance in the College of sounding them out on recent and prospective developments in international banking and finance. Business Administration at Texas A&M, had the chance to take the

Finance Prof Visits England

Reflecting the purpose of the development leave as well as the nature of the British university structure, Dr. Fraser's responsibilities at the University of Sussex were fairly light. Professors do not hold regularly scheduled lectures two or three times a week. Classes meet early in the semester, and students are given a heavy reading assignment. The classes meet again several times in the semester, and infrequent exams are given, sometimes only once a

Fraser gave one seminar during his semester at Sussex, and participated in several other seminars. The rest of his time he devoted to research at the University of Sussex and in London.

He has drawn some preliminary conclusions on the Thatcher government's attempt to control the money supply and government

spending.
"The Thatcher experiment has,

in my opinion, been a failure, and the parallels between Mrs. Thatcher and President Reagan are somewhat disturbing," said Fraser.
"Thatcher tried to reduce the size of the government and has failed. It is much more difficult to modify big government and change a welfare state than it appears on the

The Bank of England has not or could not conduct the monetarist policy the government wanted, he continued. While the Federal Reserve here has done a much better job of controlling the money supp ly than has the Bank of England, Fraser feels we're in danger of making some of the same mistakes they have.

Dr. Fraser is currently working on several ideas for articles he has developed from his research. His semester in England was not all work and no play, however. He and his family visited Scotland, Belgium, France and Germany during their three and a half month stay.

The benefits gained from this development leave are not limited to Dr. Fraser alone. The students in his classes have also benefitted from his experiences and research at the University of Sussex. Actual experience backed up by research gives substance to the theories discussed in the classroom and enriches the quality of the education received by students in the College of Business Administration.
