I'll race ya'

staff photo by Rob Johnson

Jim Magdalenski, a senior industrial engineering major from Lake Jackson, and Hal Spiegel, a junior management major from Port Lavaca, prepare for the the Eagle Straight Shot 10-kilometer wheelchair race held over the weekend.

NASA blames contractors

Faulty spacesuit studied

United Press International
SPACE CENTER, Houston — The space agency has slapped the hands of contractors for spacesuit failures that blocked the first space shuttle spacewalk, but it has not hit them in the pocketbook yet.

A government investigative team Tuesday issued a report soft-spokenly but formally blaming avoidable mistakes by

contractors for the failures Nov. 15, the fifth day of the fifth mission of space shuttle Columbia.

The question of money penalties was still pending for the contractors — United Technologies Hamilton Standard Division of Connecticut and its subcontractors, Carleton Controls Corp. of New York and F.W. Bell Inc. of Florida.

Officials said no decision whether to impose penalties would be made public before March, when the latest six-month pay period for Hamilton Standard ends. Hamilton Standard builds the suits on a cost plus fixed-fee contract.

The failures occurred aboard Columbia during preparation for a 3½-hour spacewalk by mission specialists William B. Lenoir and Joseph P. Allen.

Lenoir and Allen experienced separate and unrelated failures in each of their spacesuits, which the space agency calls extravehicular mobility units or EMUs.

A motor driving a circulating fan, water separator and water pump in Allen's suit failed, and a control regulating oxygen pressure in Lenoir's suit did not function properly.

The investigators found elec-

tronic sensors in the fan motor of Allen's suit had been exposed to moisture from breath perspiration because of inadequate sealing. The sensors were built by Bell of Orlando, Fla.

Two plastic locking devices the size of grains of rice had been left out of Lenoir's oxygen regulator. The regulator was built by Carleton Controls East Aurora, N.Y.

"In the case of the motor assembly, the failure to recognize and correct the cause of previous anomaly (failure during testing) allowed the condition to manifest itself in Allen's EMU (spacesuit) motor malfunction," the report said.

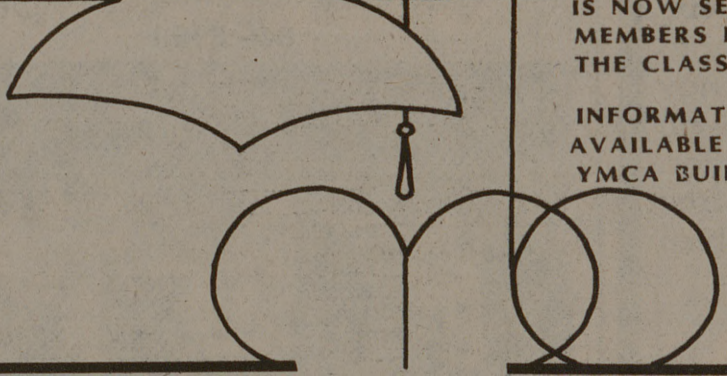

"A combination of test assembly procedures as implemented, workmanship and fabrication technique, caused the regulator anomaly in Lenoir's suit."
