Centers nix gay plasma

United Press International
AUSTIN — Two private plasma businesses say they no longer will accept blood from homosexual males because of a mysterious disease that deteriorates the body's immunity system.

The disease — acquired immune deficiency syndrome — is thought to be most prevalent in homosexuals, needle-using drug addicts and Haitians. Medical experts have not found the cause of the disease, which has a 40 percent mortality rate.

The companies they sell blood to had requested the new screening policies, representatives from the plasma center said Tuesday.

All customers are given a bulletin describing the disease and detailing the groups most likely to carry it. Clients are then asked if they belong to any of the groups. Rick Davries, manager of the Plasma Blood Center said, "They don't ask a direct question to anyone," he said. "They just ask if you are in one of the high-risk groups."

What's Up

Thursday

Texaco reprimanded for unsafe conditions

United Press International
PORT ARTHUR — Unsafe working conditions at Texaco Inc.'s refinery resulted in an accident last year which killed five workers and injured several others, federal officials said.

A citation issued by the Occupational Safety and Health Administration Tuesday cited Texaco for the Oct. 13 accident which occurred when a pipeline

broke and wildly spewed a hot chemical powder on the workers.

OSHA proposed a penalty of \$720 for the safety violation and set an April 2 deadline for safety hazards to be corrected at the plant.

"We've cited Texaco for not providing a safe work place and exposing their workers to a hazard," Gerald Baty, regional

director for OSHA, said. Texaco has 15 workers to appeal the penalty citation.

The "serious" citation stemmed from inspections of plant Oct. 14 and Nov. 14 of the accident.

A "serious" violation is when "there is substantial ability that death or serious harm could result, and the employer knew or should have known, of the hazard," Baty said.

"The employer failed to provide employment and safety training free from recognized hazard causing or contributing to serious physical injury that on or about Oct. 13, 1985, employees were exposed to hazard of hot catalyst released from the ruptured spent catalyst line," Baty said.
