Autry birthplace not for sale

United Press International
 TIOGA — Jim Wendover has given up trying to sell Gene Au-

try's birthplace for a while, at least until a lake under construction near the town of 500 is completed.

Wendover drew national attention last fall when he announced he was going to sell the downtown area of Tioga, a group of antique shops and a mineral water bottling plant, to the highest bidder.

The highest bidder in last October's auction was John Grice of Houston, who bid \$200,000 on behalf of a group of Dallas-area investors for the 14 buildings and six acres of downtown property.

But Grice, wanted by Houston lawmen for bad checks, was arrested after his picture appeared in newspapers.

The filing deadline for Student Senate and Graduate Student Council positions is

Friday, March 11, 1983.

RUN FOR OFFICE! GET INVOLVED!!!

On February 23, 1983, the Student Senate voted to eliminate of "Off-Campus Graduate" Senate positions. In attempt to justify this, they opened up the "Off-Campus" Senate seats to students of undergraduate AND graduate classifications. There are now a total of 34 Senate Seats that could be occupied by graduate students.

LET'S MAKE THE GRADUATE STUDENTS' VOICES HEARD!!!
 RUN FOR OFFICE!!!

Paid for by the Texas A&M University
 Graduate Student Council

If you have an item for "What's Up," fill out a notice in Room 510 Rudder at least two days in advance of the activity. Items are accepted by phone.

Radiation preserves food

United Press International
 NEW YORK — The use of very low doses of radiation to inhibit the sprouting of potatoes and onions has been approved in the United States, Japan and other countries.

The process gives the vegetables extended storage life and, so far, is not known to harm humans.

This is the latest development in the expanding use of radiation to preserve food by killing spoilage and disease-causing organisms. Radiation has been used for years in specialized cases to preserve food by killing spoilage and disease-causing organisms.

Apollo astronauts, for example, munched radiation-sterilized ham on the moon. American and Russian astronauts during the joint American-Soviet Apollo-Soyuz space flight ate radiation-sterilized beef, pork, smoked turkey and corned beef.

Radiation-sterilized foods

have been approved for patients who must have sterile foods, as when their immunity to disease has been altered by medical treatments.

A new scientific status summary by the Institute of Food Technologists' Expert Panel on Food Safety and Nutrition tells what is ahead in radiation preservation of food.

The near future includes the possibility there may be radiation-preserved chicken on the supermarket shelves.

There is only a small temperature rise when foods are preserved by radiation. As a result, there is minimal loss of flavor, odor, color, texture or nutritional quality.

The irradiated food, there-

fore, retains more of the flavor, taste and quality characteristic of fresh raw food.

Another possible application of radiation in food preservation is as a means of preparing commercially sterile food products.

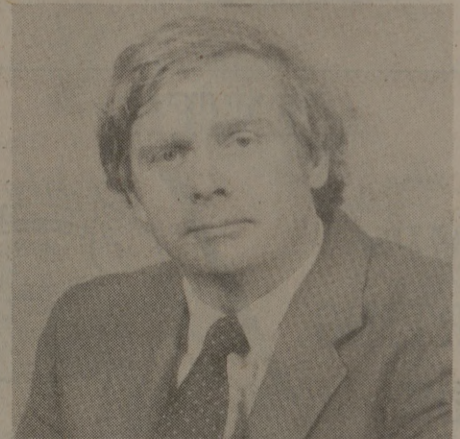

The panel said spoilage disease organisms are killed by high radiation doses.

"Such foods, therefore, can be stored like their non-sterilized counterparts. Like canned foods, radiation-sterilized foods can be stored for years without refrigeration, as long as the package is not punctured or damaged."

The panel said that the radiation process does not make foods radioactive.

The Lecture Series Continues!

TAMING LEVIATHAN: Defederalizing the American Economy

Robert D. Tollison

What is the future of private enterprise? Can we "defederalize" the American economy? Is free enterprise the major source of economic development and progress in the years ahead? How can our colleges and universities contribute to the economic well-being of our nation?

Robert Tollison will speak on the issue of "The Myth of the Corporation as a Creator of the State." Mr. Tollison is the former Director of the Bureau of Economics of the Federal Trade Commission, and is the Abney Professor of Free Enterprise at Clemson University.

WHEN: Thursday, March 10, 2:00 p.m.
 WHERE: 457 Academic and Agency Building
 COST: Admission Free!

The topical series of free public lectures is made possible through a gift from the Dr. Scholl Foundation in conjunction with the Association of Private Enterprise Education to TAMU's Center for Education and Research in Free Enterprise. Phone 845-7722 for more information.
