Senior Boots?

Nick Evanoff, a senior from El Paso majoring in chemical engineering, wears cowboy boots instead of his usual senior boots while changing clothes after the Texas A&M vs. Rice football game Saturday.

Computers aid sports statistics

by Edye Williams **Battalion Reporter**

computers are involved in my aspects of life, from ces for record keeping, billand writing form letters to nes where for preparing lgets and playing games. Now they are in still another

a — sports.
Dr. Charles Shea, professor
h the Human Performance teaches a graduate class to utilize micro-processors he area of sports statistics. Students program with the ASIC language and learn to ply the programming to ching or coaching experi-

hea said the purpose of the cation students "practical lications of the computer." lost programs developed p track of all details of a parir sport. For example, basball coach Tom Heath, wrote ram to keep track of playshots attempted, shots de, fouls and foul shots mpted and made. The prog-computes percentages of pes of shots as well as the points per game. It prints

out a table of the figures, percentages, names and numbers of the players.

Another program developed kept a total of the points won at a Houston district track meet according to events, while a third program kept a detailed account of a tennis match.

All that is required of the operator is typing answers to questions flashed on the screen. The questions are asked in logical game order and usually can be answered with one letter or

Other programs deal with the teaching aspect of physical edu-cation. They are used for grades, equipment inventory, budgeting and player histories.

Plant, mine creating town growth

Students help with towns' plans

By Michael Raulerson

Battalion Reporter
Community leaders in six small Central Texas towns will have help from Texas A&M University graduate students in coping with a population influx that will result from the construction of the Limestone Electric Generating Station and the Jewitt Mine.

Growth from construction and eventual permanent em-ployment by the plant will affect Groesbeck, Fairfield, Mexia, Buffalo, Jewett and Teague. The towns are all within a 30mile radius of the plant.

Six graduate students are working on the plans to help cope with the growth. Each student is responsible for one of the towns, Alfred Chai, a graduate student in urban and regional planning and project coordina-

KTAW 92 FM

tor, says.

The students collected data on existing conditions in each town and set goals and objectives with assistance from the people in the towns. The students later will develop alternative scenarios for the townspeople to consider, Paul McGregor, a student in the planning department responsible for Fairfield, said.

Other students involved in the program are Narra Smith – Groesbeck; Lee Scott – Mexia; Cameron Walker — Buffalo; Jim Quirk — Jewett; and Don Uram — Teague. Tim Campbell and Guillermo Moreno are in charge of graphics.

The students hope to have the plans, which were started this summer, completed by late December, Chai said.

The plans will cover major elements such as housing, land

use, transportation, community facilities such as sewage treatment and utilities available now and those needed in the future, Chai said.

'Services may not be enough to serve new people," Chai said.

Gathering the information for the base was tough because some of the towns had incomplete records of past planning, Chai said.

Three companies that will be involved in the operation of the power plant are providing the funds for the plans. Northwest-

ern Resources, will mine the lig-nite for the plant, Houston plant, Gardner said. Lighting and Power will operate the plant, and Utility Fuels Inc. will transport the coal to the

The three companies came together to sponsor, the grant, James Gardner, a professor in the urban and regional planning department, said.

The companies could see a need for guidance for the communities due to the changes arising from construction of the

The department has a community planning project every semester, Gardner said. This project is "unique in that there are six towns being done at the same time," he said.

The plant will be constructed about four miles northwest of Jewett and is scheduled to begin commercial operations in April 1987. The lignite will be mined from the Navasota River north of Marque to I-45 north of Buf-
