General Dynamics denies overcharging

United Press International ST. LOUIS — General Dynamics Corp. said Wednesday that reports it has overcharged the Air Force for tools needed to repair the F-16 Falcon fighter are "blown out of all proportion." Congressional sources said an investigation found the company proposed to sell a four-inch wrench to the Air Force for \$9,600. The Air Force also has acknowledged that it is investigating "possible fraudulent activities" by General Dynamics, but declined to give details.

from its St. Louis headquarters. "The allegations of overcharging on spare parts and support equipment have been blown out of all proportion and give no consideration to the details of the procurement processes established by the armed services which frequently distort costs of individual parts." General Dynamics said it is "particularly concerned" about a report it charged \$2,043 for a "reverse back spotface cutter." A congressional committee reported that it called the manufacturer of the part, ATI Industries of California, and found it cost \$13.

knowledge of General Dynamics," the company said. General Dynamics added that it is attempting to determine "whether any individual employee was aware that the price was inflated, or personally profited in any way." The company continued: "If this investigation determines that any employees were involved, the company will cooperate fully with the justice department in prosecuting those involved." General Dynamics, which builds the F-16 at its facility in Fort Worth, got \$5.9 billion worth of defense contracts during fiscal year 1982, making it the nation's largest defense supplier.

Accused of injuring baby Nurse pleads innocent

United Press International SAN ANTONIO — Nurse Genevieve Jones pleaded innocent Wednesday to charges she injected a 4-week-old child with a blood-thinning drug. Jones, wearing a blue dress and appearing to have lost weight during her stay at the Williamson County Jail, stood before District Judge Pat Priest as he read the Nov. 21 indictment charging her with injury to a child.

The one count indictment alleges that on Jan. 2, 1982, Jones injected 4-week-old Roland Santos with heparin, causing the infant to bleed excessively. The child survived and was later released from the hospital. The indictment resulted from a 10-month investigation on infant deaths in the pediatric intensive care unit at Medical Center Hospital, where Jones was employed.

District Judge Pat Priest scheduled Jones' trial for Feb. 27. At Jones' request, Priest ordered that she be returned to the Williamson County Jail in Georgetown, where she is scheduled to go on trial for murder Jan. 9 for the death of 15-month-old Chelsea Ann McClellan of Kerrville.

Prosecutors claim the infant was injected with a muscle-relaxant drug in Sept., 1982 at a Kerrville doctor's office. The case was transferred to Georgetown on a change of venue. Priest gave Jones the option of staying in the Bexar County Jail for several days in order to consult with her court-appointed attorney, Royal Griffin of San Antonio.

Trade zones set at Mexico border

United Press International WASHINGTON — Four areas along the financially beleaguered U.S.-Mexican border have been granted foreign trade zone status, allowing deferment on U.S. customs duties on various goods, officials said Wednesday. A foreign trade zone is an area outside U.S. Customs Service territory where importers or manufacturers may bring in goods exempt from Customs duties until they are officially imported into the United States. The goods also may be exported again.

Foreign zone status already is held by seven other Texas areas — Brownsville, McAllen, Galveston, El Paso, Dallas-Fort Worth, San Antonio and Harris County. There are 97 foreign trade zones nationwide. Eagle Pass was granted a zone adjacent to the Eagle Pass Customs port of entry. The zone includes five sites totaling 1,380 acres, including 1,100 acres at the Maverick County Airport, and will be operated by the non-profit Maverick County Development Corp. Prospective uses include warehousing, distribution, and the processing of construction materials and apparel.

"These cases were expedited because the border is suffering from severe problems"

The non-profit Starr County Industrial Foundation will operate a 42-acre zone on three Starr County sites near the Rio Grande City and Roma Customs ports of entry. Planned uses include warehousing, distribution of machinery and equipment, and liquor.

Laredo and Rio Grande City in response to the economic problems the border is suffering as a result of Mexican peso devaluations.

Del Rio will establish a 422-acre zone on four separate Val Verde County sites near the Del Rio Customs port of entry. The largest site is 220 acres within the Del Rio International Airport. The zone will be used for warehousing and distribution of appliances, appliance parts and house slippers.

"These cases were expedited because the border is suffering from severe problems," said Dennis Puccinelli, an analyst for the Foreign Trade Zone Board.

Laredo will establish a 221-acre zone three sites in Webb County near the Laredo Customs port of entry, two of them at the Laredo International Airport. Firms want to use the zone for warehousing and distribution of products such as luggage, tile, electronic equipment, handicraft items, textile products and valves.

"The president's task force on border problems said this should have a priority as there are some areas with upwards of 30 percent unemployment in those towns because of the peso devaluation," he said.

Officials had estimated that because of their backlog of applications it could take five months to process the border requests following a hearing held Sept. 8 in Laredo.

Congratulations. You've just become a better photographer.

No need to change your equipment or your technique... just try the new family of Kodacolor VR films.

Advances in color print film technology can help you get the best color pictures ever from Kodak films. Try all four new films in your 35 mm camera... and be a better photographer!

Kodak redefines sharpness. Kodacolor VR 100 film is the sharpest color negative film we've ever made.

Ideal for big blowups with top quality. Great for close-ups, anything where detail is important.

Kodak redefines versatility. Kodacolor VR 200 film has all the sharpness, fine grain, and color saturation you got with Kodacolor II film — with twice

the speed. Great all-around performer. **Kodak redefines fast action.**

Kodacolor VR 400 film has wide exposure latitude, plus color that's even more saturated on underexposures, and grain that's even finer than Kodacolor 400 film. Ideal for stopping sports action, even with long telephoto lenses.

Kodak redefines low light. Kodacolor VR 1000 film is the fastest color print film in the world, for good pictures in low light, and when you need very high shutter speeds to stop action. An advanced, new emulsion technology enables the film to capture more light without the grain and loss in sharpness you'd normally expect with such a fast film! Try all four new films... and see all the ways you can be a better photographer!
