WASHINGTON — "Never look back," cautioned Satchel Paige, the legendary baseball pitcher and philosopher. "Something may be gaining on you."

The last time I dared glance over my shoulder, something, in Paige's prophetic words, was indeed gaining on us. The year 1984 was moving up fast and appeared certain to overtake us by next Jan. 1, if not sooner.

But not, apparently, in the way that George Orwell predicted. (Orwell, by the way, couldn't throw a decent curve either.)

Compared to the 1984 that Orwell envisioned in 1948, when he took his chilling look into the future, the real thing is shaping up as a major wash-out.

Sure, technology has been marching into society like crazy.

That is apparent to anyone who is exposed to home computer commercials on television. Basically, however, the direction is somewhat different from what Orwell forecast 35 years ago.

It wasn't long ago that computer language written for the layman was mainly devoted to explaining the meaning of Orwellian abbreviations and terminology. Microchips alone were enough to start dreaders of "1984" quaking in their fortune cookies.

Now, however, the home computer business has marched to the point where it is beginning to incite travesty. Publication of a new "irreverent computer dictionary" apparently means someone considers it harmless enough to poke fun at its foibles.

It is true that much of the computerese fun-poking thus far consists of play on such jar-

gon as "byte." The title of the aforementioned dictionary, I am obliged to report, is "Small Bytes." And the authors go to some length to point out that small bytes are not the same things as "nybbles."

Such pouncing upon the obvious must have George Orwell turning over in his inkwell.

Once we get 1984 behind us, our next glimpse of the future may be even more blurred. Consider this myopic destiny conjectured by the World Future Society at a recent conference:

"There is momentum to keep things as they are."

I commend that divination to all who cringe at the thought of 1984. Impetus generated by inertia is one force Orwell didn't anticipate.

In other words, if you peer too far ahead you may find you have already caught up with things in front. Only the U.S. government can claim such progress.
