Old age images contrasted

By **KIRSTEN DIETZ**
Reporter

A exhibit focusing on the changing images of older people in American society will be displayed in the Medical Sciences Building lobby through Nov. 2. It is sponsored by the Smithsonian Institution Traveling Exhibition Service.

The exhibit, "Images of Old Age in America," dramatizes the contrasts between the popular images of aging in three broad time periods and the realities of existence for the elderly through the use of graphics, quotations, photographs and original text.

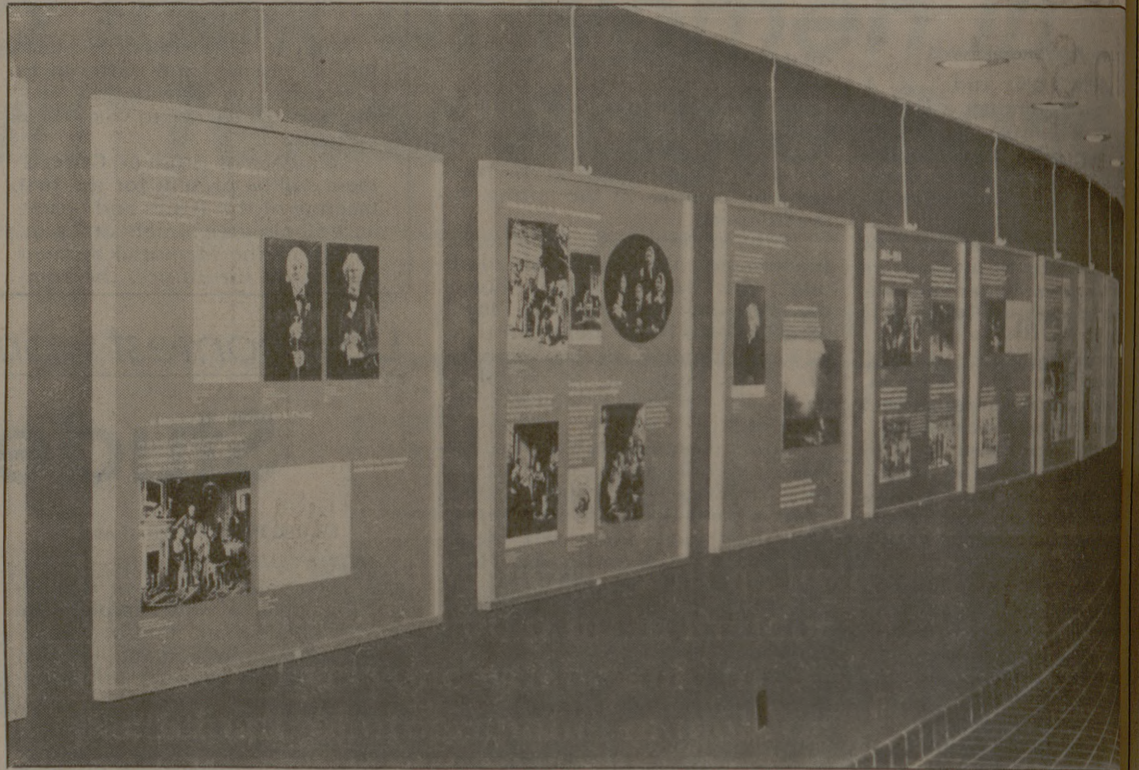

More than 100 photographs and reproductions of prints are combined on three panels grouping them into the time periods.

During the first period represented, 1790-1864, the elderly were respected as guardians of virtue and useful members of society.

In the next time frame, 1865-1934, post-Civil War technological developments made the elderly appear obsolete and their worth was lessened. After World War I, an increasing number of Americans began to consider the aged a "social problem."

In the last period, 1935-present, stereotypical images of the elderly are being replaced by the growing awareness of the creativity, diversity and potential of older people.

Mary Alice Pisani, assistant to the dean of the College of Medicine, said the exhibit is important because of the increasing number

The "Images of Old Age in America" exhibit, on display in the Medical Sciences Building, shows the changing attitude towards old age throughout America's history.

of older people in society and their importance.

According to statistics from the Texas Department on Aging, another American turns 60-years-old every 42 seconds, and Texas

has the fifth-largest population of people 60 and older.

Pisani said research in geriatrics and gerontology, scientific studies relating to the problems of the elderly, is one of the mis-

sions of the College of Medicine.

"Images of Old Age in America" was researched by the University of Michigan's Institute of Gerontology.

Race car designed by students

By **ALIS MAHLEN**
Reporter

After approximately 750 man-hours, the designing of the Texas A&M 1985 model Formula SAE race car is complete, says Tony Griffith, a senior mechanical engineering major.

The car, designed by a team of five mechanical engineering students, will be entered in the annual Society of Automotive Engineers competition held in 1985 at the University of Texas at Arlington, Griffith said.

The two day event, May 30 and June 1, consists of five different stress tests for the car, Griffith, design crew chief for the car, said.

"The rules of the competition state that the car must be entirely

conceived, designed, built and driven by students," he said.

Students designed the car for a project in ME 446, Mechanical Engineering Design III, this semester.

Construction of the new car will begin soon and be completed as a project for ME 404, an electrical instrumentation class, Griffith said. The construction will take about 750 hours.

"We have received donations from H.B. Zachry, the American Society of Mechanical Engineers and Howard Racing on Texas Avenue," Griffith said.

Regulations state the car construction and design can cost a maximum of \$4,000.

The nationwide event has had entries from as far north as Canada, Griffith said. The event has been

hosted by the University of Texas at Austin for the last five years.

This is the third year that A&M has competed in the SAE Formula races. Last year, A&M came in second place behind the University of Houston.

"One reason the car did so well is because it is simple and sturdy," Griffith said. "It has only one cylinder, but we have hot-rodged it up to between 35 and 40 horsepower."

The engine in the 1984 car was taken from a Yamaha 500, Griffith said.

The events in the competition test speed, maneuverability, fuel economy, endurance and suspension quality, Griffith said.

The speed test consists of a 100-yard straight course. Entries are individually timed and cars reach

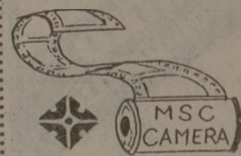

speeds of at least 50 mph, he said.

The car's ability to maneuver tightly curved course is tested in maneuverability event, Griffith said. The timed outcome of this test determines the starting position for endurance test, he said.

The endurance test is a two-event. Four drivers complete a of two heats, Griffith said. Scores consist of two combined times, he said.

"Driving skill is definitely a set," Griffith said. The course contains many curves and few straight ways — long enough only to pass said.

The skid pad test, added in tests the car's ability to handle corners and the quality of the suspension, Griffith said.

FASHION PHOTOGRAPHY

A SPECIAL MEETING ON FASHION Photography and Modeling will be held Monday Oct. 22, 7:00 p.m. in Rudder Rm. 601. Everyone will be able to participate photographing models or modeling, or both! So bring your camera. A Fashion Photographer & Pro Models will be speaking.
