dged to a The Texas A&M Library Council e on the h is studying a proposal regarding the future of the author/title card cata-

should Dr. Vivian Paul, chairwoman of the committee, said the proposal would put all new additions to the d an Ameri card catalogue into the Automated Library Information System.

going a ALIS, a computer catalogue further which locates books by either author, though a utle or call number.

w, I will If the proposal is adopted, the existing subject card catalogue file still will be maintained and the existing author/title card catalogue will be kept, Paul said.

Only the new author/title catalogue will be put in ALIS. The new acquisitions will not be put into the old author/title card catalogue. The subcommittee is gathering

faculty response to the proposal, Paul said.

Paul said the advantages and disadvantages of the proposal were published last semester in Fort-nightly, a newsletter for the A&M faculty and staff.

The advantages include searching for information by call numbers, finding uncatalogued items such as curriculum guides and materials on reserve, plus faster cataloguing of new books. With the use of the sys-But web tem, library patrons also will be able to find out circulation information the Fortnightly with the article we maken

regarding the availability of books. A future advantage could be re-mote access from locations other than the library. Cross-referencing and searching for keywords in the book title eventually will be possible. The potential disadvantages are, according to the Fortnightly article, the possible reluctance on the part of faculty, staff and students to learn the new system; the expense of acquiring the necessary equipment; the possible lack of terminals and long lines; and the response time of the computer during peak use. A response sheet was included in

Paul said she received a number of comments on the proposal, but she wants to hear more feedback.

"We want to get as wide a spec-trum of responses as possible," she said. To get those responses, the committee is going to conduct a ran-dom sampling of the faculty by mail with a telephone follow-up for unreturned responses, she said.

"We want more faculty response and we're going after it," Paul said. The committee's final report to the Library Council will be presented Feb. 28.

The Computer-Image

Generation

Join a new generation of engineering challenges

Evans & Sutherland is shaping the future of dynamic, computer-generated interactive graphics. Our special purpose digital computer systems are used for pilot simulation, CAD engineering and other applications requiring digital memory-stored models. We provide an invaluable technological background to develop your career, and the benefits to match.

Among the most prominent openings we have right now are for Hardware Design Engineers, Software Engineers, and Systems Programmers.

If you're graduating with a BS or MS degree in EE, CS or Math with a CS emphasis, put your career a new generation ahead. Work in a team environment at a locale surrounded by spectacular mountains, within minutes of the world's finest skiing and the many activities of Salt Lake City.

Please sign up at the Placement Center to interview with us on February 11.

If this interview date is not convenient, please send a resume to:
