Sick leave discussed

(continued from page 1)

greater concern to me than a fairly innocuous little rider on sick leave. As it turned out, the rider is not so small and unimportant as it first seemed.

"So we are now in the position of trying to define what was meant by those fairly simple words that, in their effect, have been interpreted to mean that less-than-12-month employees of higher education are now not entitled to sick leave."

Asking the attorney general's office for an opinion will do two things, she said. One, it will bring the issue into focus, possibly clarifying it. More importantly, it will serve notice on institutions that the issue is not clear cut.

Delco insists that the House Higher Education Committee is concerned about reactions to the law but that it is important for institutions to hold off on what they propose to do in their efforts to comply with the law.

As a result of Delco's words and further discussion later, the Council of Faculty Governance Organizations voted to assign a task force for

the purpose of monitoring the sick leave situation, planning possible strategies and reporting back to COFGO at its spring meeting held in February.

A motion also was passed to draft a letter to the Select Committee On Higher Education expressing concern over the new policy.

The select committee recently was established by the legislature to conduct studies and give it guidance on the future of higher education in Texas. The committee is composed of three representatives appointed by the legislature, one of whom is Delco, and various other individuals appointed by the governor, lieutenant governor and the speaker of the House.

Frank Wright, a longtime member of COFGO, said, "We've got to learn how to control these expenditures and cut higher education, but there's another equally strong purpose behind it. Higher education is the tool of the future, and if we want our economy to be adapted to the future, higher education has to be our major emphasis."

The Select Committee on Higher Education will hold its first meeting on Oct. 14.

Fluctuating job market

(continued from page 1)

March, salaries had flattened to \$2583.

And most disappointing was the small increase in the number of jobs offered to petroleum engineers. The recruiters' survey had predicted a 23.5 percent increase in offers this year. But an increase of only 2 percent was reported by petroleum engineers in the placement council report.

Sargent cited the energy industry slump and unstable interest rates which hampered exploration as major factors in the final figures. He added that over the next thirteen years petroleum engineers will see only a 22 percent increase in employment, the lowest among engineering fields.

"Certain analysts are predicting another energy crisis in '86," Sargent said, "and however business goes, so do job offers."

Electrical engineers also saw average salaries move up and down, but finished above last year's high.

Average salaries for electrical engineers dipped in March to \$2258 but finished at a high of \$2283.

Sheetz said according to the recruiters' survey, electrical engineers should see continued prosperity in the job market.

Sargent said electrical engineers will see employment boom in the 1990s. The average increase in jobs for electrical engineers is expected to be 65 percent over the next thirteen years.

Mechanical engineers reported a 3.2 percent increase over last year's salaries and an increase in job offers, according to the council report.

Sheetz said next year's salaries for mechanical engineers should move them even closer to the top of the highest paid list.

According to the placement council's report, engineers found the highest-paying jobs in petroleum and natural gas industries, but received more offers from manufacturing and industrial businesses.

General business majors reported a 5.2 percent increase in salaries over last year.

Sargent cited the outlook for ac-

countants as being typical of expected growth in employment for business majors.

Employment for accountants is expected to increase by 40 percent over the next 13 years, meaning 344,000 jobs will be available for new college grads.

For agriculture majors, '85 figures are mixed.

Agricultural science majors reported fewer offers than in previous years, according to the placement council report. But agricultural science majors did receive higher salaries than last year.

Sheetz said the administration's tight purse strings and slow government growth may make job hunting difficult for agriculture majors.

Sargent's office is projecting a much slower than average increase in agriculture and forestry science positions through 1995.

But John Gudelman, associate director of the A&M Placement Center, disagrees with Sargent's predictions.

Gudelman said statistics from the United States Department of Agriculture show an abundance of jobs will be available for future agriculture majors.

Individuals planning a career in higher education are in for discouraging news.

Sargent said his office predicts a 15 percent decrease in jobs for university educators, constituting a loss of over 100,000 jobs between 1982 and 1995.

He said his pessimistic projections are based on the current trend of decreasing college enrollment.

Statistics from the department of labor show a decrease in the number of 18-to 24-year-olds in college of almost 22 percent over a thirteen year period.

Sargent said those predictions reflect a declining birth rate over the past two decades.

Although a decrease in college enrollment may be depressing news for some, it is encouraging news for future graduates.

Sargent said job offers for college graduates should continue to exceed the number of bachelor's degrees awarded throughout this century.

What's up

Monday
