Israeli jets attack bases in Lebanon

Associated Press

SIDON, Lebanon — Israeli warplanes streaked in at dawn Wednesday and rocketed Palestinian guerrilla bases in citrus groves that border a sprawling refugee camp, flattening one building and badly damaging two.

Hospitals in this ancient southern port said one guerrilla was killed and five guerrillas and a Lebanese civilian were wounded in the first Israeli air force attack this year inside Lebanon.

Four jets rocketed the bases of Syrian-backed guerrillas on the outskirts of the Ein el-Hilweh Palestinian refugee camp near Sidon, which is 25 miles south of Beirut.

They made several passes at the three targets nestled among orange and lemon trees around the camp.

The air attack occurred shortly before an infiltrator from Jordan killed two Israeli soldiers and wounded two in an ambush at the border settlement of Mehola in the occupied West Bank.

The Israeli military command said the infiltrator was shot dead.

Prime Minister Shimon Peres of Israel, who was in Berlin, said the air raid would not affect the plan for Middle East peace negotiations he is promoting on his European tour.

U.N. peacekeeping troops in south Lebanon dismantled four 107mm Katyusha rockets pointed at Israel minutes before they were to be fired by an electronic timer Wednesday, a U.N. source said, speaking on condition of anonymity.

It was the third time in a week that soldiers of the U.N. Interim Force in Lebanon have found guerrilla rockets and defused them.

King Hussein of Jordan and Palestine Liberation Organization chairman Yasser Arafat have been meeting in Amman this week to consider ways of overcoming U.S. objections to a PLO role in peace talks with Israel.

The Israeli air strike, the first in Lebanon since Oct. 27, occurred two days after the bombing of a Jerusalem pizza parlor in which little damage and no casualties were reported.

Health official: Inhaling smoke can be harmful

Associated Press

WASHINGTON — It's time to stop dismissing non-smokers as "finicky busybodies" when they complain about inhaling other people's smoke, a government health-safety official said Wednesday.

John C. Topping Jr., staff director of the Environmental Protection Agency's Office of Air and Radiation, said evidence linking "passive smoke" to disease, though fragmentary, "seems sufficient to warrant strong steps to cut down involuntary exposure to cigarette smoke."

Topping, speaking at a National Academy of Sciences public hearing, said his own agency was not proposing cigarette-smoke regulations. But he spoke approvingly of scattered cities, such as San Francisco, that have passed laws on the subject. And he said public health warnings would be a good idea.

"The non-smokers' rights movement has been portrayed by tobacco interests as an assemblage of finicky busybodies intent on impos-

ing their values on smokers," Topping said.

However, he said, freeing non-smokers from exposure to others' smoke "would save the lives of thousands of non-smokers annually."

Sorell L. Schwartz, pharmacology professor at Georgetown University Medical Center, said information gathered so far "is inadequate to show a real relationship between passive smoke exposure and the presence of chemicals in a non-smoker's blood."

He complained that one study suggesting a link between disease and passive smoke depended on interviews — of lung cancer victims, relatives or friends — for such crucial information as whether those victims smoked and what exposure they had to others' cigarette smoke.

On the other hand, an author of the study that was criticized for its dependence on interviews, Dr. Lawrence Garfinkel, said: "The question of whether the involuntary smoker faces a health risk has been answered. The time to act is now."

Report says Americans are living longer

Associated Press

WASHINGTON — Americans are healthier and living longer, but also paying steeply for it, the government said Wednesday in its annual report on the nation's health.

Life expectancy is at a record high and infant mortality at a new low, the report said.

Although infant mortality fell to an estimated 10.6 deaths per 1,000 births in 1984, health experts said they continue to worry about the slowing pace of the decline, and a persistent gap between the rate at which white and black infants die.

A child born in 1983 could expect to live 74.6 years, a new high, the study said. The longest life expectancy is enjoyed by white females, 78.7 years; the shortest by black males, 65.4 years.

On average, a man who turned 45 in 1983 could expect to live to the age of 74.7, more than three years

longer than his 1950 counterpart, while a woman celebrating her 45th birthday in 1983 could expect to live to 80.4, more than 4½ years longer than the 45-year-old woman of 1950.

Gains in the nation's health have not come cheaply, however. Per capita spending on health reached \$1,580 in 1984, three times the amount spent 10 years earlier, the report said. And medical infla-

tion continues to surpass the overall rise in consumer prices, although at a slower pace than in recent years.

Gains in life expectancy were attributed in large part to the decline in cigarette smoking and to improved treatment of high blood pressure. The latter has been a focus of government educational campaigns, particularly among blacks.

While more than half of all adult males smoked in 1965, that figure dropped to about 35 percent in 1983. Statistics for women showed a much smaller decline in smoking, from 34.2 percent to 29.9 percent — and black women showed an increase.

The difference showed in fatality rates. The death rate from heart disease dropped 28 percent from 1970 to 1984, while the death rate from strokes dropped 49 percent over the same period.
