A&M official says budget cuts won't cripple University

Davis says advance planning will minimize harm to budget

By Mona Palmer

The budget cuts passed by the Legislature in the second special session won't devastate Texas A&M's budget because the reductions were anticipated and planned for, an A&M official said.

The cuts will reduce A&M's 1986 budget by 4.5 percent and the 1987

budget by 6 percent.
"We had already planned and anticipated cuts in the budget," said Dr. Eddie J. Davis, vice president for fiscal affairs. "We are in the position to manage. . . . We will continue to

Davis said the Board of Regents reduced A&M's budget by 7 percent in spring 1986 in accordance with Gov. Mark White's ordered spending reductions.

The spring budget cuts will result in a \$37 million savings in 1986. The

largest cuts approved in the spring were a hiring freeze and a cut in utility spending — a combined savings of \$24.2 million. Cuts in maintenance, capital improvements, travel, capital equipment and the early sale of forest timber totaled \$12.8 mil-

Davis said the cuts recently mandated by the Legislature do not exceed White's order.

"The bottom line is that the Legislature acted responsibily . . . and didn't go beyond what the governor had asked us (the University) to do."

Robert Smith, associate vice president for fiscal affairs, said the Legislature's cuts in higher education were inevitable and were the best University officials could expect.

The Legislature considered some programs such as public education sacred, Smith said, but higher education was not spared

China's National Day celebrated at A&M

By Pam Deleery Reporter

About 400 students, faculty members and guests celebrated the National Day of the People's Republic of China here Sunday.

Just as Americans celebrate the Fourth of July, the Chinese celebrate National Day. They spend it with friends and family members — eating and drinking and having a good time. National Day is the official holiday held to commemorate the founding of the People's Republic of China. The 37th anniversary of the event was Oct. 1.

The reception was sponsored by the China Club, which treated its guests to a buffet of Chinese delicacies with food ranging from tradi-tional egg rolls to Chinese barbecue. Guests tried a variety of Chinese soups, sweet potato fries, sweet and sour pork and, of course, fortune

Dr. William Mobley, deputy chan-

cellor, congratulated the Chinese students on their National Day celebration in his brief welcome speech.

Tina Watkins, international student adviser, discussed the role of the International Student Association in helping Chinese students. Not only does the organization help Chinese students deal with homesickness, but it also teaches the students about the American system and way of life.

Jun Li, China Club president, expressed his appreciation to Americans for their consideration and kindness toward the Chinese stu-

Huayi Tong, spokesperson for the club, said the organization is designed to promote cultural and technical exchanges between Chinese students and the students, faculty and staff at A&M. The club also provides social activities for Chinese visiting scholars, students and their families, he said.

UT robot research project gets \$4.2 million contract

AUSTIN (AP) — The U.S. Department of Energy has awarded the University of Texas a \$4.2 million contract to help design a robot that would repair nuclear reactors and

remove terrorist bombs.

Delbert Tesar, a UT mechanical engineering professor who is directure.

A major use for the robot system would be repair of steam-generator tubes in nuclear reactors, he said. ing the research project, said, "Even if no new reactors are built, existing ones will have an increasing need for this technology, and it will be needed for fusion reactors as well."

Some UT engineers working on the project want the robot to be hu-

man in appearance, similar in some respects to Hollywood movie robots,

"If we do it right, we'll have mod-ules for the system — arms, wrists and joints — that may or may not look like their biological cousins," he

said. "But I'm in favor of it looking more like a mechanical structure."

The robot will be "highly dexter-

ous" and rigged to be operated by humans, Tesar said.

"We've analyzed this (use) extensively and found that the robot system could save the industry about \$300 million a year in 1980 dollars," Tesar

Tesar said the robot system could be used for the highly dangerous work of "decommissioning," or dis-mantling, nuclear power plants that have been permanently shut down. The robot also could be used to remove terrorist bombs, or to clean up debris after an earthquake or a coal
