**Space center will offer visitors taste of flight**

SPACE CENTER, Houston (AP) — Visitors to the Johnson Space Center soon will be getting a taste of the reality of spaceflight at Space Center Houston, its new general manager says.

"The best thing we want people to come and experience is what manned spaceflight is all about and what the challenges of it can be," said Vance Ablott, who will oversee fund raising and operations for the new visitors' center.

The center is scheduled to open in summer 1991.

For years, space program observers longed for a more spacious and revealing visitors' center. Some also have expressed hope that archives and personal papers of important people in the space program, now in various museums and university collections, could be housed closer to Johnson Space Center.

But for the time being, Space Center Houston is planned as a tour-

ists' site to bring the taxpayers closer to the space program, its past and its future.

"It's not a museum, and we don't want to be a museum park," Ablott, a 20-year veteran of the Walt Disney organization, said. "We're providing a hands-on environment. We want people to understand what it is like to land the shuttle."

"The shuttle is an interesting aircraft," he said. "Theoretically it should not fly. Young people will understand how difficult it is," referring to computer displays that will appeal to young visitors and will be used to simulate a shuttle flight.

"These are actual training devices used by the astronauts," Ablott said. "What they do is handle portions of whatever flight is taking place. These will be modified for our use, with computer screens and keyboards. In a sense it's like a video game. Kids will be familiar with that."

He said shooting should start in summer on a film to be shown in center that will show how astronauts are trained.

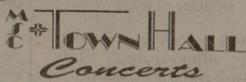

Another planned feature is a gallery with space flight artifacts, Mercury and Gemini capsules and other items, Ablott said.

"The most exciting thing will be a stylized visit of the mission control room, in real time, where you hear from a briefing officer what is actually happening right now on space flight" or some other NASA activity, he said.

A tram-ride tour will take visitors around the Johnson Space Center with guides describing the work done in various buildings.

"We expect to complete development by the end of this year. This will enable us to sell the building in January and break ground in early February."

The total cost, Ablott said, will be about \$64 million.

**Writers, scientists share ideas**

Research consortium looks into future

AUSTIN (AP) — When the MCC computer research consortium took a look at technology's future recently, it turned to what might seem an unconventional source for a group of scientists: science fiction writers.

But as part of a regular seminar for corporate members, MCC added to an agenda full of technical discussions one workshop featuring several "cyberpunks," authors who base their themes in technology.

"The idea was to get all these creative minds into one room, authors and researchers, and have them throwing ideas back and forth at each other," Cynthia Williams, spokesman for the Microelectronics and Computer Technology Corp., said.

"This session was particularly well-attended," she said. "We do have a lot of science fiction fans here, as you can imagine."

MCC is a consortium formed by the nation's high-tech industry in 1982 to conduct long-term computer and technology research. Twenty companies are shareholding members, and 17 more are associate members.

MCC hosts periodic seminars to report developments to members. MCC technology analyst Gary

"The idea was to get all these creative minds into one room, authors and researchers, and have them throwing ideas back and forth at each other."

— Cynthia Williams, MCC spokesman

Knight came up with the idea for a science fiction-science workshop.

"Science fiction is known as the literature of ideas," Knight said. "And there's a subset of writers — called cyberpunks — who use high-technology as the setting and background for their stories. So I thought, 'Gee, I'd like to talk to these people and see what they think is lurking out there.'"

The result was a two-hour panel discussion, "View of the Technology Future," that featured William Gibson, Walter Jon Williams, Lewis Shiner, Pat Cadigan, Bruce Sterling, Tom Maddox and Omni magazine fiction editor Ellen Datlow.

Since both the scientists and the science fiction writers are contemplating the future, their meeting was a natural, Knight said.

"What we try to do at MCC is figure out what the future needs are — society's needs, business needs, human needs — and we try to watch what technologies are emerging that might fill those needs," Knight said.

"The writers have insight into people and society, so their views and intuitions about how society and technology will interact are of value to us," he said.

While little new ground was broken, the writers' perspectives were helpful, Knight said.

"We gave the writers some tours of our labs and on-going projects," he said. "Being writers, they had their notebooks out. Something would be said and I'd notice two or three of them scribbling away. You could see plots being hatched," he said.

Knight said one thing the future may hold is another writer-scientist session.

"It was never thought of as a serious component (of the bigger meeting), but having done it and seen the enthusiasm that was generated, we think we might run it again," he said.
