Vandiver foresees great role for Texas in space program

UNIVERSITY NEWS SERVICE

AUSTIN - The five-year flight toward a national Space Grant Program was a little bumpy at times, but Texas will now be an even bigger player in the U.S. return to space, Texas A&M University President Emeritus Frank E. Vandiver — the

"father" of the Space Grant, said.
Speaking at the charter planning meeting of the Texas Space Grant Consortium, Vandiver recalled Tuesday night how he became discouraged at the slow development of the record Space Grant Power P the national Space Grant Program in

But now, Vandiver - who origi-

nated the concept while serving as Texas A&M's president — said he's glad to celebrate a "Texas gift to the

"Through this bipartisan act of Congress, the United States is going to continue leading the world in

space," Vandiver said.
"New generations of young people will fill the shoes of the space pioneers, thanks to scholarships and fellowships under the Space Grant Program," Vandiver said. "New funds will flow to the institutions in the Texas consortium.'

The consortium, a collaborative effort under the leadership of Texas A&M and the University of Texas at Austin and with membership by 19

other universities, three state agencies and 18 aerospace or research organizations, began planning sessions here Tuesday and continues through Wednesday.

Vandiver recalled how early reactions among other university presidents to his proposed Space Grant Program was mixed and how NASA was reluctant to support a program it saw as diverting money from exist-

ing programs.

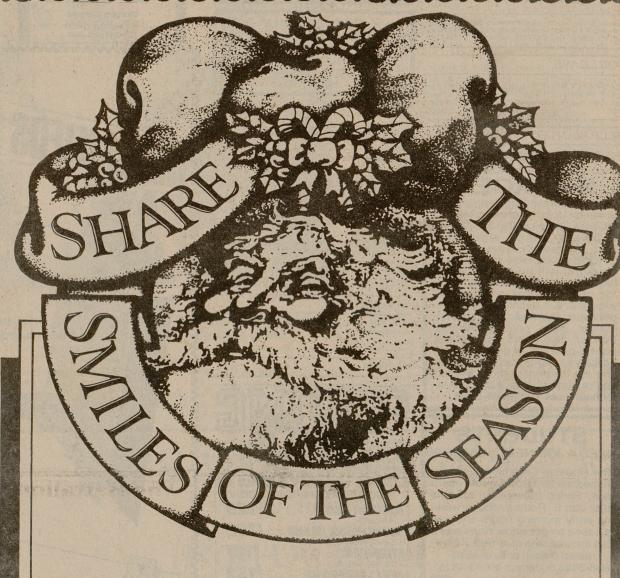

Texas' Congressional delegation gave the needed encouragement, explained Vandiver, and Texas A&M leaders helped convince Washington policymakers that Space Grant was needed, Vandiver said.
