Systems Engineers

Shelf Life.

When you think of high quality personal computing products with staying power, you think of Microsoft. We wrote the book on operating systems with MS-DOS. Now, Microsoft Windows graphical environment version 3.0 is fast becoming the interface of choice throughout the world.

Products like Microsoft Word, Excel and Works, to name a few, have stood the test of time...and we're working on revolutionary ideas that will become tomorrow's software classics.

Our best-selling products don't stay on the shelves for long. They're the pride of our top-line software sales professionals.

As a Systems Engineer you will act as the technical member of an account sales team. For both the sales team and our customers, you will provide the technical expertise to integrate and implement Microsoft products into the workplace.

Filling this two-sided role requires a combination of strong communication skills and technical knowledge. It will be your responsibility to see

that our products meet our customers' needs.

This involves working with networking compatibility and setup, memory management issues, internal Windows or DOS programming. You will play a key role in reinforcing our commitment to quality products and customer service.

You'll have all the creative freedom you want, and be surrounded by some of the brightest minds in software development. We'll help you get the job done right.

If you are about to graduate with a Bachelor's degree in Computer Science, Electrical Engineering (with a software emphasis), Math, Physics or a related discipline, and have a strong handle on PC-based software and programming languages, come talk with us at our On-campus Interviews.

We are an equal opportunity employer and are working toward a more culturally diverse workplace.

On-campus Interviews • Thursday, February 20, 1992
