## Birkenstock

**They're Here !!!**  
Sizes and styles for men and women in a variety of colors.....

**The Shape.**  
Following the shape of a healthy footbed is straight, from the big toe to the heel. The front of the footbed allows plenty of room for the toes to bend and flex.

**The Support.**  
Contours in the footbed's interior are placed with anatomical precision to provide cushioning for the heels and support for the arches. Slightly raised toe bars encourage the natural gripping motions of the feet. Molded heel cups cradle the heels and absorb shock.

**The Function.**  
Your feet are elastic by nature. Bones, arches, and ligaments work together to absorb and return energy with each step. Birkenstock footbeds contribute to this energy exchange by absorbing shock, cushioning and supporting the arches, and allowing the feet to move naturally.

Birkenstock footwear re-creates the yielding surface of the earth and allows your feet the freedom of movement necessary for good health. A simple, yet brilliant, concept.
