Injecting steroids into premature infants may save lives, panel says

The Associated Press

WASHINGTON — Injecting steroids into mothers giving birth prematurely could save 7,000 infants a year and at least \$157 million in health care costs, a National Institutes of Health panel said Wednesday.

The committee said all women at 24 to 34 weeks of pregnancy who show signs of a threatened premature birth are candidates for the therapy.

Doctors have been reluctant to use the corticosteroid treatment because of worries about side effects. The committee said risks from the drug are much less than the lethal complications often caused by prematurity.

Corticosteroids used in the procedure are synthetic forms of a hormone normally produced by the adrenal gland. Studies have shown that when injected into a birthing mother, the hormone is carried to the fetus where it accelerates development of blood vessels and lungs of the unborn.

About 100,000 premature babies are born annually in the United States and about a third of them die. The most lethal complications are respiratory distress, caused by immature lungs attempting to breathe, and bleeding in the brain. Using the corticosteroid therapy will save about half the threatened premature infants with these conditions, the panel said.

Dr. Duane Alexander, director of the National Institute of Child Health and Human Development, said widespread use of the corticosteroid therapy would save the lives of 6,000 to 7,000 premature babies a year.

The committee said it found no convincing evidence that the corticosteroids harmed either mother or child.

A natural high

The Associated Press

A Bufo alvarius toad poses for a mugshot after it was confiscated in a drug arrest in Angels Camp, California. The toad secretes a venom that when dried and smokes produces a high that is said to eclipse LSD. The toad is one of four being held for evidence for use in a trial.

FBI considered using 'mind control' on Koresh

The Associated Press

NEW YORK — Federal agents toyed with the idea of using a Russian "mind control" device to try and influence David Koresh during the standoff at the Branch Davidian compound, the Village Voice reported.

In its March 8 editions, the weekly newspaper quotes Steven Killion, deputy chief of the FBI's technical services division, as saying he considered trying to control Koresh's actions with "subliminal" messages as they negotiated by telephone.

Killion dropped the idea after the makers of the device said it possibly could have the re-

verse effect of making Koresh more violent, the paper said.

Several weeks before Koresh and 78 followers died in a fire that destroyed their Waco, Texas compound, scientists from the Moscow Medical Academy demonstrated their device to U.S. intelligence, military and law enforcement officials at a Washington conference on futuristic weapons, the Voice said.

During the meeting, Killion said he wanted to use the device on Koresh.

"In the normal course of your negotiation with the individual by telephone, you can impress a coded message. It is not realized consciously by the subject, but subconsciously, subliminally, they understand it," Killion said.

The paper quoted Dr. Igor Smirnov, who demonstrated the device, as saying he had brought only "entry level" equipment to show. After the FBI offered to have a working version brought to the United States, Smirnov conceded that it might not function as hoped, the paper said.

The Voice did not say how the device was supposed to work.

The 51-day standoff began after four federal agents and six Davidians were killed as authorities tried to arrest Koresh on weapons charges. Eleven surviving Davidians were put on trial, all were acquitted Saturday of murder and murder conspiracy. Five were convicted of involuntary manslaughter and two of weapons charges.

Morales

Continued from Page 2

said Tipton, who said he's now just an employee at Summer Sky. "This is an information line if people want to ask questions, but if they want a counselor they get put through to a counselor."

Tipton said the hotline received a "flat rate" from Summer Sky, but that the rate didn't fluctuate depending on referrals.

Summer Sky executive direc-

tor Cathern Brooks said she knew nothing about the lawsuit and wouldn't discuss any of the allegations.

The suit alleges that Summer Sky provided payments to a private doctor, David C. Boucher of Stephenville, to justify the patients' admissions. Boucher didn't immediately return a message left at his office by The Associated Press.

Morales accused Summer Sky of violating the Texas Health and

Safety Code by paying fees to headhunters, and failing to disclose its relationship with the hotline to prospective patients.

In the other lawsuit, Morales said Janet Greeson of A Place For Us of Houston ran a telemarketing scheme aimed at overweight people.

Greeson's national marketing company encouraged people with weight problems to call its toll-free line, then inquired about their insurance, according to the suit.

Those with adequate coverage were told they needed to be hospitalized for their obesity problems, the suit alleges. The lawsuit accuses Greeson of referring people to a mental hospital without a physician's evaluation.

Greeson, reached at her home in Los Angeles, deferred questions to her attorney, Marty Keach of Las Vegas. Keach didn't answer messages left Wednesday at his office by The Associated Press.
