- Formulating the budget
- Designing the proposal
- Grant monies available

Computing Toolbox

A weekly column dedicated to computing at Texas A&M

The Texas A&M Gopher

In early 1992, a new creature began burrowing its way around Texas A&M. This friendly critter, called Gopher, helps you browse many of the resources on the local campus network or on the worldwide Internet. Texas A&M's Gopher provides easy access to endless amounts of information. You can use Gopher to do such things as:

- Find out what University events are happening on any given day.
- Look up faculty, student or staff phone numbers, electronic mail addresses, and office locations.
- View current and archived issues of campus newsletters such as the *Fortnightly*, *System News*, *Computing News*.
- Access NOTIS, FirstSearch, TEXSearch and the Evans Library Archives.
- Check out current campus employment opportunities and job descriptions.
- Read up on computer resource information.
- See what the local and national weather forecasts and current conditions are.

Because Gopher is a tool used on the Internet at thousands of other locations, the amount of information available is unbelievable. Besides information pertaining to a particular geographical area, Gopher servers also specialize in medicine, science, commerce, government, entertainment and other special interests. Gopher servers deliver text, index searches, still images, audio, and public domain software all over the world. With Gopher, you can:

- Learn what earthquakes took place yesterday.
- Read today's student newspaper from a school 2,000 miles away.
- Pick up a quote from *Paradise Lost* for a term paper.
- Read city council meeting minutes from Wellington, New Zealand.
- Listen to the final U.S. Presidential Debate of 1992.
- Read about the Human Genome Project.
- Learn about federal grants.
- Download public domain software.

These examples are a tiny sampling of the information Gopher can deliver. The fantastic thing about Gopher is that you don't need to be a computer geek to use it. Gopher is easy to access and easy to use. If you have a VM, Open VMS/VAX or UNIX account, after logging on type Gopher to access Gopher's Root Menu. If you're a student, and you don't have an account, use ACCESS to create one. (Call 845-4217 for information.)

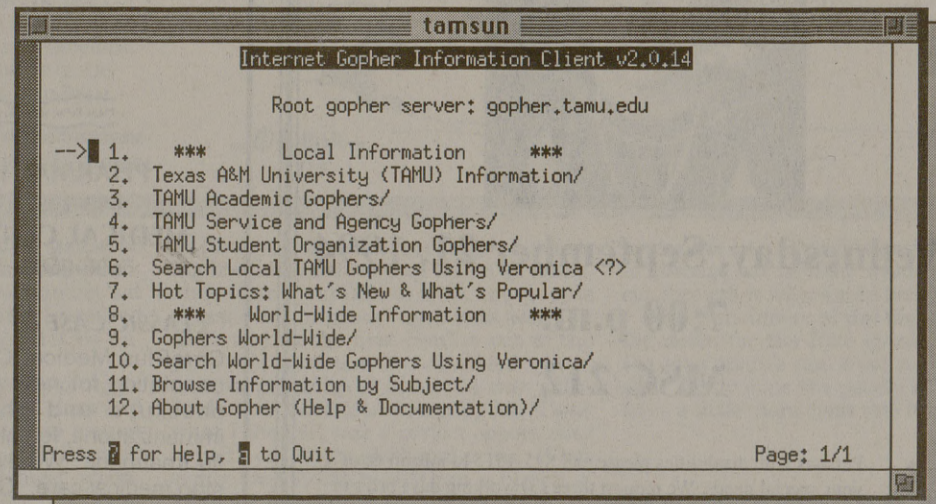

Our own Texas A&M Gopher

If you don't have an account, you can access Gopher from the computers in most of the microcomputer labs on campus. If you have a computer that is connected to the campus network via Ethernet, you can install the Gopher software on your machine.

Once you've accessed Gopher, a list of menu options appears. You can choose menu items until you come across the appropriate information, or you can use VERONICA (the Gopher search engine) to do a local or worldwide search for any word or combination of words.

If you have general questions about using Gopher contact a CIS Help Desk. If you, your department, or your organization would like to make information available on Gopher, send electronic mail to GOPHER@TAMU.EDU or call Sam Fleitman at 845-6903 or Dawn Lee at 847-9368.

The Texas A&M Gopher Root Menu screen on TAMSUN.TAMU.EDU

Computing Toolbox is published by Computing and Information Services (CIS) at Texas A&M University. Please send comments, topic suggestions, and questions for the Computing Wizard to SUGGEST@TAMU.EDU or call 845-9325. We want your input!
