Rudder said she is lucky because she had to work outside of the home only one year of her life. She taught physical education for \$900 a year in 1936.

One of her hobbies is playing the organ for Crestview Methodist Retirement Center on Fridays.

Public speaking, Rudder said, is not on her list of hobbies. But her husband encouraged her to face her fear by asking her to speak to the Board of Regents in his absence. She recently spoke to the

Computing and Information Services (CIS) at Texas A&M Uni-

versity will be hosting Internet Awareness Week this November 4-8, 1996, from 8:00 a.m. to 5:00 p.m., in rooms 301, 302, and 308 of the J. Earl Rudder Tower Conference Center. Internet Awareness Week is an educational event that serves as a fo-

rum for departments, agencies, and organizations at Texas A&M and in the community to discuss how the Internet and related technologies facilitate and enrich our academic, professional,

we would like to encourage to attent this event and learn about these fascinating information technologies. There is no fee or registration to attend the presentations—you may attend as many as you would like. For more information on the Internet Awareness Week, call 845-8300 or view the program of events

on the World Wide Web at: http://cis.tamu.edu/iaw/.
Any updates in the program will be reflected on the Web page. Multiple Sessions

Creating a Homepage, Part 2 Learn more HTML to make your homepages spiffy. HTML for-matting tags and special effects tags will be discussed and

Delphi Client Server Application and

Track Testing
Services for Students with Disabilities (SSD) in the Department of Student Life administers approximately 10,000 tests per year to students who need to take their tests in an alternative place or format as part of their academic accommodation. From the beginning, this process (which involves multiple contacts with the student and department) had been done by hand. The old process was inefficient and did not allow easy retrieval of criti-cal information. Adaptive Technology Services has developed a Delphi 2.0 32-bit multi-threaded client/server database application to track the testing process. The Test Manager system uses barcodes to identify each test and track its movement through

SSD has plans to distribute the application to other universities with similar needs. Eventually, the system will incorporate student disability records, e-mail functionality and Web connections for on-line queries of tests. This presentation will demonstrate the application and operation of the above de-
