Tickets available at the MSC Box Office.

Heads up

Aston Hall roommates **Jim Pike**, a freshman computer science major, and **Rudy Cassol**, a freshman electrical engineering major, practice their soccer skills at the Rec Center indoor soccer court Monday. Both play on the Aston intramural soccer team.

CONFERENCE

Continued from Page 1

Canales said although the future of global warming is unknown, it is an important enough issue for the White House to focus on it.

Canales joined Dr. Gerald North, head of the A&M meteorology department; Dr. Thomas J. Crowley, an A&M professor of oceanography and deputy director for the Texas Center for Climate Studies and Dr. Robert Hariss, an A&M professor of civil engineering, in a local discussion and question period at A&M's downlink site.

North, local coordinator for the conference, said similar presentations and informational forums were presented across the nation.

"I agree that the evidence is compelling that the globe has been warming because of man's influence and will continue," North said. "The president and vice president, along with leaders around the world, realize that something must be done. Countries are now able to come together to make decisions on global climate problems."

The Clinton administration believes citizens do not know enough about global warming, North said. Attempts to educate the public will help pass legislation on climate changes.

Opponents of the conference, including the Citizens for a Sound Economy, say there is not enough information about global warming to consider it a major problem.

Carol Jones, a field director for the

Texas Citizens for a Sound Economy, said the group is working to inform the public about environmental issues but does not believe there is enough data on global warming to implement industrial changes.

"The government should not spend billions of tax payers' dollars on something that hasn't been proven to hurt the U.S. economy," Jones said. "We are proponents of clean air and clean water, but there is no conclusive evidence that we should remedy the problem (global warming). More research should be done to find that there truly is a problem."

The Kyoto Conference, scheduled for December in Kyoto, Japan, will bring world leaders together to discuss the problems of global warming and identify international solutions.

UT

Continued from Page 1

If the board accepts the committee's recommendations, members will reveal the names of finalists and announce their choice within 21 days. Until then, the process is confidential to protect the identity

"I'm anxious to actually meet the candidates face-to-face."

MARLEN WHITLEY
PRESIDENT, UT STUDENT GOVERNMENT

of candidates who don't want their names known unless they have a chance of being chosen. Some candidates could still drop out before the 21 days begin.

Two other members of the committee, UT professor Gilbert and Student Government President Marlen Whitley, also they were pleased with the process and candidates.

"I'm anxious to actually meet the candidates face-to-face," Whitley said. "There's a lot of participation on campus ... to find leadership, and we're looking forward to delivering that."

Gilbert said the campus community had been respectful of the process, and "we're very happy things have been kept very confidential."

"It will be a real exciting time when everyone knows who the candidates are" during the next few days, she added.

STATUS

Continued from Page 1

Twelve girls will attend a workshop and will be inducted into the University of Texas chapter of Sigma Lambda Gamma.

Olivia Cortez, a founding member of the organization and a psychology major, said she is passionate about these organizations and another way to promote Hispanic women on campus.

"We want to be recognized and have a voice on campus," she said. "Sigma Lambda Gamma will help Hispanic women."
