Conference to provide information for owners of exotic pets

BY AMY CURTIS  
The Battalion

The Exotic Pets Conference will offer information on the care of animals from birds to iguanas. The conference is Saturday from 8 a.m. to 5 p.m. in the Multidisciplinary Building and is open to practicing veterinarians and veterinary medicine students. Dr. Mark Drew, assistant professor of zoological medicine, said the conference is an annual event that helps keep veterinarians up to date with happenings in the field of veterinary medicine. He said the conference will cover topics such as endocrine diseases, viruses of birds and general

health of snakes and birds. Drew said exotic pets encompass many small animals like birds, ferrets, mice, rabbits, snakes, iguanas and other reptiles. He said the conference will be in lecture format. "It is more of a general conference rather than specific," Drew said. Drew said the conference is sponsored by the Office of Continuing Education and the zoological medicine division of the department of Large Animal Medicine and Surgery. Carolyn Wallace, coordinator of the College of Veterinary Medicine's Continuing Education office, said the conference has been offered every December for the past

five years. Wallace said many veterinarians are interested in exotic pets and pet products. "Exotic pets are becoming more popular with people in cities," she said. Wallace said there will be conference time devoted to actual case studies, problems that vets have actually encountered in their practices. Wallace said there will be 100 veterinarians and students present. She said that the topics were chosen by Dr. James Johnson and based on suggestions of people who attended the conference last year. She said that the suggestions were also based on problems veterinarians had encountered in their own clinics.

**A&M Foundation offers gift annuities to donors**

BY MELISSA JORDAN  
The Battalion

The Texas A&M Foundation is offering gift annuities, which will allow donors to receive partially tax-free returns on their donations for the remainder of their life. Dennis Prescott, vice president for development at the Texas A&M Foundation, said gift annuities offer important differences from charitable remainder unitrusts, which the foundation has made available to donors for a number of years. Prescott said gift annuities are a contract between the gift and the donor that give the donor lifetime partially tax-free returns on their donation. "I'm really happy about it because it's another service we can offer both to the University and to the donor," he said. Prescott said gift annuities offer competitive payout rates and are secure instruments because they are backed by the full asset base of the foundation. Gift annuities are available for a minimum donation of \$10,000, but payments can be received only by people 50 years of

age or older. At the termination of the annuity, 25 percent of the remainder of the fund goes back to the Texas A&M Foundation and 75 percent goes to the University program designated by the donor. Prescott said the lower minimum of gift annuities makes it easier for more people to support the University through donations. "That's a lot more attainable to people," he said. "We want to cover as many of the bases as we can. This covers people that might not be covered any other way." Prescott said gift annuities have been utilized by many charities and are successful. "They're really popular, and we hope they will be [popular] here too," Prescott said. RoseAnn Thomas, manager of communications, said gift annuities are an easy type of donation for individuals to make. "Gift annuities are just one more tool that will allow a wider group of people to participate in supporting the University," Thomas said. "Ultimately the result will be more financial support for the University."

**Convict's body pulled from Trinity River**

HUNTSVILLE, Texas (AP) —

Death row inmate Martin Gurule, the subject of a massive manhunt since he escaped the Ellis Unit on Thanksgiving night, was found dead in the Trinity River about a mile away Thursday. Gurule's bloated corpse was discovered about 5:30 p.m. beneath a bridge by two off-duty prison employees fishing near the community of Riverside, said prison spokesman Larry Todd. "We are confirming it is him, based upon the prison clothing that he was wearing and based upon facial features," Todd said. "The body had deteriorated from being under water." The body was found about a mile east of the prison at the mouth of Harmon Creek, which empties into the Trinity River. "It was clearly the intense pressure put on him by search teams and dogs and horseback that forced him to swim Harmon Creek," spokesperson Larry Fitzgerald said. The creek and river had been swift from recent rains.

**Cadet seeks about stolen by**

A Corps of Cadets sent

car broken into and the stolen on Friday Nov. 20 parked on the I-35 feeder street in Austin. Jeff O'Jibway, a senior major, said the monetary value of the boots is estimated at \$1,000 and \$1,100. He said the sentimental value of the boots is priceless because they were given to him by his father when he was a child. Other items taken included a camera, a golf club and a camera. "I didn't think it was a good idea to park, but apparently O'Jibway said that a car behind him was also broken into. He said the police told him probably would not be able to retrieve the stolen goods. O'Jibway said his car was stolen from his car. Texas A&M Corps of Cadets sticker, and it could have been a target. Anyone with information contact University Police Department at 845-2345.

**Volunteers sought for clean-up effort**

Wolf Pen Creek is the site of a clean-up effort that needs volunteers this Saturday. David Scott, a Brazos County Council member and co-chair of the clean-up and a professor in the Recreation and Tourism Sciences Department, said the park is a potential keystone in greenway development. "Wolf Pen Creek will be the keystone in greenway development for the city in the future," he said. "We're trying to make it more attractive to look at and more people who don't know about it," he said. The clean-up will include developed areas of the creek and the park and Texas Avenue. Volunteers should meet at the Wolf Pen amphitheater at 8 a.m. Saturday. The clean-up is at noon. For more information, contact Scott at 845-5334.

**CHRONOMAT**

At a time when instruments unerringly cope with Mach 1 flight data, continued improvements to the mechanical chronograph simply underscore that there's more to time than technology. A movement's intricate beauty or a hand-polished case's lustrous gleam do put technological progress in a broader perspective. Like the Concord, the world's first but surely not last super-sonic transport, CHRONOMATS draw time and space ever closer with aesthetic excellence as well as outstanding technical performance.
