U2 wins record of the year

Alicia Keys, O Brother soundtrack win at Grammys

LOS ANGELES (AP) — Alicia Keys, whose classically influenced soul debut was one of last year's biggest albums, and the bluegrass soundtrack to *O Brother, Where Art Thou?* each won five Grammys Wednesday.

The Irish rock band U2, whose inspirational music struck a new chord after Sept. 11, took four awards and denied

Keys the chance to set a record for most Grammys ever by a female artist.

Keys' song "Fallin'" won song of the year, and she was named best new artist. She also won three awards in rhythm 'n' blues categories, tying Lauryn Hill's 1999 record of five awards.

"I'd like to dedicate this to just thinking outside the box and not being afraid of who you are no matter what you do," the 21-year-old Keys said after picking up one of her trophies.

U2's record of the year award for "Walk On" marked the second straight year they won that top category. Last year, it was for "Beautiful Day."

"The songs do change their meaning. Music changes shape to fit the predicament it finds itself," U2's lead singer Bono said. "This year the predicament was a very different America. We've always loved coming here. But this year I've rediscovered my love of America, the great idea as opposed to the great country."

The *O Brother, Where Art Thou?* soundtrack won album of the year. The album of country roots music and bluegrass was shunned by country music radio and beat out U2 and Bob Dylan for the top album award.

"We are filled with gratitude not only that you have chosen to honor this work in this way, but also because we were afforded the chance to make it in the first

place," said producer T Bone Burnett. "And, for the great that making it was."

Another artist who had a chance to break Hill's record was India.Arie. The alternative soul artist whose debut "Acoustic Soul" was nominated for seven awards but won none.

Host Jon Stewart poked at the show's increased sensitivity to terrorism by pretending to set off a detector while walking on stage and poignantly reminded the audience of how the world changed since the Sept. 11 terrorist attacks. Two large gas masks were placed on the stage in his boxer shorts.

"Remember when we were going to sing with Elton John? Stewart joked. "Those were the days, right?"

The folk country duo Alison Krauss and Union Station won two awards, best country performance by a group and best bluegrass album for "New Favorite."

Besides best album, *O Brother* won best country disc and garnered Stanley, who sang "O Brother, Where Art Thou?" the best male country vocal Grammy win. It also won Soggy Bottom Boys the award for best country collaboration with vocals.

Stanley's win came days after he celebrated his 75th birthday.

"I think this is the best day I've ever had," said Stanley.

Research

Continued from page 1A
drying; both are alternatives to the common method of frying and yield a healthier, higher quality product.

Higher quality fried foods have a nice color and texture, a lower oil content and less destruction of the food's naturally occurring vitamins. Frying at higher temperatures creates more oil absorption and greater vitamin loss, resulting in a less healthy product, Moreira said.

"Once you understand the frying process, you can create a better product," she said.

Vacuum frying occurs at a lower temperature, which results in a lower oil absorption and less vitamin loss.

The vacuum frying process is also ideal for frying delicate foods such as fruits, Moreira said. When using a traditional fryer, the sugar in fruit turns dark. This is not the case with vacuum frying, which will produce a lighter color.

Steam drying uses steam blasts rather than oil to cook chips or other foods. This is beneficial because vitamins are retained in the finished chip and a

crunchier structure is produced.

Both of these alternative processes are already used by snack food companies in some Asian countries, including Japan, but aren't widely popular in the United States, Moreira said, adding she does not know whether U.S. companies currently use these methods.

"Companies in the snack industry are very secretive about their products," Moreira said.

Although these processes result in a healthier and higher quality snack, they are less efficient than traditional frying, causing production to be more expensive. This could be a reason for the technology to not be used by food producers in the U.S., Moreira said.

Once these processes become commercialized, companies should be able to supply consumers with healthier versions of fried foods, she said. Improvements in fried foods have been made already because of better packaging technologies and a greater understanding of the quality of oil used in frying.
