tillage, horticulture, arboriculture and the care of stock in the senior year.

"It was a lot of hard labor," Kunkel said. "Enrollment crashed because people didn't want to work."

He said students in agriculture wanted their college education to relieve them from hard labor, not prepare them for a life of it.

In 1884, change came as George Washington Curtis was appointed professor of agriculture. He reorganized the curriculum to emphasize professional development of the agricultural specialist, Kunkel said.

"Throughout the years, the curriculum has changed, but the structure and heart of the College was established by Curtis," Kunkel said.

In the years that followed, the Texas Agricultural Experiment Station was organized, distant substations were sited, short courses were established and a Farmers Institute was organized.

By the turn of the century, Kunkel said agricultural research emphasized the best varieties of cotton, corn, vegetables, fruit,

forages and grasses.

The School of Agriculture was officially established in 1911, and E.J. Kyle was named dean.

During Kyle's 33 year tenure as dean, the diversity continued to grow with new Departments of Agricultural Engineering, Dairy Husbandry, Poultry Husbandry, Genetics, Rural Sociology, Agricultural Economics, Fish and Game, and Accounting and Statistics, Kunkel said.

After World War II, the School of Agriculture saw remarkable changes.

In 1946, the Board of Directors required unification and

coordination of the School of Agriculture, Agricultural Experiment Station and Agricultural Extension Service.

New academic departments were created such as range and forestry, plant physiology, and nutrition. Graduate research assistantships were awarded, and for two decades, departments in the School of Agriculture accounted for more than half of the doctoral degrees awarded by Texas A&M.

"In some of these ways, the School of Agriculture began to

lead," Kunkel said.

In 1963, when the Agricultural and Mechanical College of Texas was renamed Texas A&M University, the School of Agriculture became the College of Agriculture and was later designated the College of Agriculture and Life Sciences in 1989.

During the 1970s and 1980s, research began to flourish and academics in agriculture emphasized the sciences, Kunkel said. This trend continues today.

"Quantitative approaches are beginning to emerge into undergraduate and environmental concepts," Kunkel said. "Major trends in science and management are taking over."

Along with the overwhelming changes in the college during the past 90 years, Kunkel said the personalities and experiences of current faculty and students are different from those 50 years ago.

"The faculty is changing because most of the people being trained now are being trained in the sciences," he said. "Most of the faculty now don't have close ties to the old farming techniques."

Kunkel said students also are emphasizing the sciences more.

"Students have changed enormously," Kunkel said. "They are clearly more sophisticated, mature and stronger in the sciences. They're more widely experienced in life."

## by R. DeLuna Zey

Continued from page 1

Bryan-College Station Edition Sunday's editions. "He was going to do in deciding to proceed with the lawsuit."

Zey is countering Pressley's defamation claim. A&M spokesperson Lawson said it was the first Bowen had reversed a decision by the provost to fire a faculty member.

Dismissal of a tenured member should be reserved for the "most offensive and egregious actions," Bowen said in the past. But he said Zey's contributions in sociology, her mentoring of doctoral students and her previous work as a woman at A&M earned her a second chance.

She will remain on suspension with pay until July 15.

Zey has been on the A&M faculty since 1982. She is married to state demagogue Steve Murdock, who runs the Texas State Data Center at A&M.

Another of Zey's admirers is Andrew Golub of Houston. Bowen should have accepted findings of the panel that almost she was not at fault.

"This administration tarred and feathered her," Kathy Thom said, echoing Zey's claim that she was targeted in a vendetta. "She has been labeled in a negative way, and now it's for the administration to give and clear her name."

The Zey case sparked debate among the faculty called into question the governing A&M's post-1990 review process. A committee of the early stages of discussion proposing clarifications of policy, said Dean of Faculty Karan Watson.

## Grants

engineering and computer science. This consortium was established through Texas bill 353, also known as the Technology Workforce Act of 2001. This bill was called in Gov. Rick Perry's State of the State address in January 2001. Perry called on grant programs to increase the number of degrees in the two departments.

Each computer science and engineering department in public and private universities in the state of Texas were asked to submit proposals. Out of the proposals received, the top proposals were selected to receive the grants given by the Texas Engineering Technical Consortium.
